

ABSTRACT OF THE DISCLOSURE

The seat hammock comprises a seat surface portion, a backrest surface portion and a pair of lower side surface portions extending to rise
5 upward from both side edges of the seat surface portion in a used state. Each lower side surface portion has a bottom connection end connected to a side edge of the seat surface portion, a back connection end, and an upper connection end. The back connection end is provided behind a back surface of the backrest surface portion so as to overlap with it and connected to the
10 back surface of the backrest surface portion at a position inside of the backrest surface portion at a distance from both side edges. The upper connection end is connected to an upward extension frame member extending upward from a rear end of a member forming a seat portion of the child-care instrument.
